Sir:

TRANSMITTAL

Attached are:

- ☒ Transmittal Letter (in duplicate); Request for Reconsideration of Patent Term Adjustment (in duplicate) with attached Appendix A and B.
- ☒ Return Receipt Postcard

Fee calculation:

- ☒ No additional fee is required.
- ☐ Small Entity.
- ☐ An extension fee in an amount of \$_____ for a _____-month extension of time under 37 C.F.R. § 1.136(a).
- ☐ A petition or processing fee in an amount of \$_____ under 37 C.F.R. § 1.17(_____).
- ☐ An additional filing fee has been calculated as shown below:

					Small Entity			Not a Small Entity	
	Claims Remaining After Amendment		Highest No. Previously Paid For	Present Extra	Rate	Add'l Fee	or	Rate	Add'l Fee
Total		Minus			x \$25=			x \$50=	
Indep.		Minus			x 100=			x \$200=	
First Presentation of Multiple Dep. Claim						+\$180=		+ \$360=	
					Total	\$		Total	\$

Fee payment:

- ☐ A check in the amount of \$_____ is enclosed.
- ☐ Please charge Deposit Account No. 23-1925 in the amount of \$_____.
- ☐ Payment by credit card in the amount of \$_____ (Form PTO-2038 is attached).
- ☒ The Director is hereby authorized to charge payment of any additional filing fees required under 37 CFR § 1.16 and any patent application processing fees under 37 CFR § 1.17 associated with this paper (including any extension fee required to ensure that this paper is timely filed), or to credit any overpayment, to Deposit Account No. 23-1925.

Respectfully submitted,

**REQUEST FOR RECONSIDERATION OF
PATENT TERM ADJUSTMENT**

Mail Stop Patent Ext
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Dear Sir:

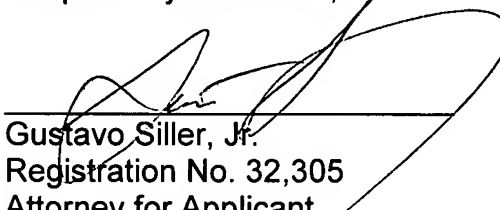

The Patent Application Information Retrieval (PAIR) system indicates a patent term adjustment that was calculated by the U.S. Patent office pursuant to 37 C.F.R. 1.701 of 475 days. A copy of the Patent Application Information Retrieval (PAIR) system Patent Term Adjustment History is attached as Exhibit A.

Applicant's Attorney believes that the patent term adjustment should be 280 days. For the reasons stated herein, reconsideration of the patent term adjustment is respectfully requested. Please charge any additional fee required or credit for any excess fee paid to Deposit Account No. 23-1925. A duplicate copy of this Petition is attached.

The present application is subject to two terminal disclaimers. On June 15, 2007, Applicant filed a terminal disclaimer to U.S. Serial No. 10/823,474 and a terminal disclaimer to U.S. Serial No. 10/823,484. A copy of the cover page of U.S. Serial No. 10/823,484 (U.S. Patent No. 7,220,499) is attached as Exhibit B. U.S. Serial No. 10/823,484 (U.S. Patent No. 7,220,499) was extended or adjusted under 35 U.S.C. § 154(b) by 280 days. The present application and U.S. Serial No. 10/823,484 were filed on the same day. Therefore, Applicant believes that the present application should be adjusted or extended by 280 days and not 475 days.

It is respectfully asserted that the patent term adjustment determined by the U.S. Patent and Trademark Office for the present application may not be correct. Accordingly, Applicant's Attorney respectfully requests the U.S. Patent and Trademark Office to reconsider, and make revisions to the PAIR system Patent Term Adjustment History in view of the previous remarks. In addition, it is respectfully requested that the patent term adjustment be re-calculated by the U.S. Patent and Trademark Office in view of the above remarks. Office personnel are invited to contact the undersigned attorney for the Applicant's Attorney via telephone if such communication would be beneficial in fulfilling this request.

Respectfully submitted,

Gustavo Siller, Jr.

(57) **ABSTRACT**

A CPP giant magnetoresistive head includes lower and upper shield layers with a predetermined distance therebetween, and a giant magnetoresistive element (GMR) including pinned and free magnetic layers disposed between the upper and lower shield layers with a nonmagnetic layer interposed between the pinned and free magnetic layers. A current flows perpendicularly to the film plane of the GMR. The magnetoresistive head further includes an antiferromagnetic layer (an insulating AF of Ni—O or α -Fe₂O₃) provided in the rear of the GMR in a height direction to make contact with the upper or lower surface of a rear portion of the pinned magnetic layer which extends in the height direction, and an exchange coupling magnetic field is produced at the interface with the upper or lower surface, so that the magnetization direction of the pinned magnetic layer is pinned by the exchange coupling magnetic field in the height direction.
